

ARUN KUSHWAHA

Data Analyst | Python & SQL | Software Engineering
Delhi, India | +91-9667183963 | arunkushwaha10b02@gmail.com

PROFESSIONAL SUMMARY

B.Tech Computer Science Engineering student with strong foundations in Python, SQL, statistics, data analysis, and data visualization, complemented by hands-on experience in Java, Spring Framework, REST APIs, and web development. Proficient in Pandas, NumPy, Matplotlib, and Seaborn for data manipulation, exploratory analysis, and visualization. Built full-stack and AI-assisted applications, including a RAG-based study application using client-side document processing and Google Gemini API. Seeking an entry-level Data Analyst role while developing toward Data Science and Machine Learning.

EDUCATION

B.Tech in Computer Science & Engineering — Mahavir Swami Institute of Technology, Delhi	Expected 2027
Senior Secondary (XII) - CBSE — Sri Lal Convent Sr. Sec. School	2023 82%
Secondary (X) - CBSE — Sri Lal Convent Sr. Sec. School	2021 86%

TECHNICAL SKILLS

Programming:	Python, Java, JavaScript, TypeScript, HTML, CSS
Data Analysis:	Pandas, NumPy, Data Cleaning, Data Preprocessing, EDA, Data Manipulation
Visualization:	Matplotlib, Seaborn
Statistics:	Descriptive Statistics, Probability, Central Tendency, Dispersion, Correlation
Databases:	SQL, MySQL, Relational Databases, Database Design
Software Engineering:	OOP, DSA, REST APIs, Backend Development, Spring Framework, Spring Data JPA, CRUD
AI / GenAI:	RAG, Document Processing, Google Gemini API
Tools:	Git, Jupyter Notebook, VS Code, Microsoft Excel

PROJECTS

Cogniflow — AI-Assisted Study Application

React | TypeScript | Vite | Three.js | Google Gemini API | RAG | localStorage

- Developed a client-side AI-assisted study application enabling students to learn from their own educational resources.
- Implemented a RAG workflow for processing, indexing, retrieving, and extracting relevant information from user-provided documents.
- Integrated the Google Gemini API for contextual AI-assisted study interactions and learning-content generation.
- Implemented localStorage persistence for user data, preferences, and learning materials without a dedicated backend database.
- Built a 3D Knowledge Map using Three.js to visually represent learning content.

InterAdda — Internship Discovery Platform

HTML | CSS | JavaScript | Node.js | Express.js

- Developed a platform helping students find and explore private and government internship opportunities from a centralized interface.
- Designed responsive interfaces to simplify internship discovery and improve accessibility of opportunity information.
- Implemented interactive frontend functionality using JavaScript for browsing and managing internship information.
- Applied full-stack development concepts to address the fragmented process of finding relevant internship opportunities.

MyDay — Task Management Web Application

Java | Spring Framework | REST API | MySQL | CRUD

- Developed a web application for organizing and efficiently managing day-to-day activities.
- Implemented CRUD operations for creating, retrieving, updating, and deleting tasks.
- Developed backend functionality using the Spring Framework and designed RESTful APIs.
- Integrated MySQL for persistent task storage and database management.
- Applied OOP and backend development principles to structure application logic.

LEARNING & DEVELOPMENT

- Strengthening expertise in Python, SQL, Data Analysis, Statistics, and Data Visualization.
- Building foundational knowledge of Machine Learning and Data Science.
